*A new product update from...dla*

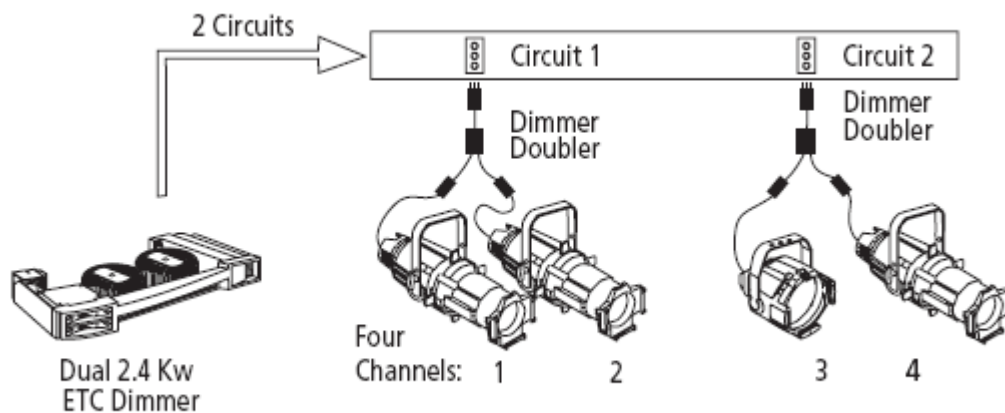

**ETC Dimmer Doubling...what is it?**

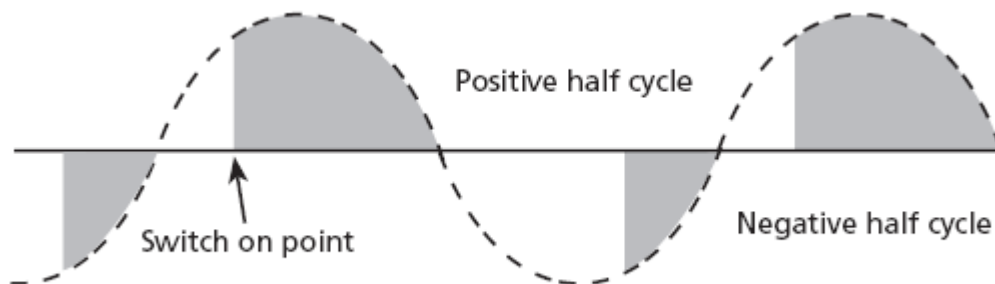

1) **ETC Dimmer Doubling** allows two fixtures to operate independently using only one dimmer (one dimmer, one cable, two independent circuits).

2) Each 2.4KW dual dimming module can provide up to four channels (provides twice the number of available dimming channels).

3) **One Source Four fixture** operates on the positive half of the cycle, the other on the negative half (Fewer dimmers to buy, less wiring and installation cost, less space needed in dimming closet).

Data sheet is attached.

Please contact Diversified Lighting's dimming and controls department for info. and assistance:
