
A new product update from...dla

Kim introduces Warp9 LED. The promise of LED's has finally been realized.

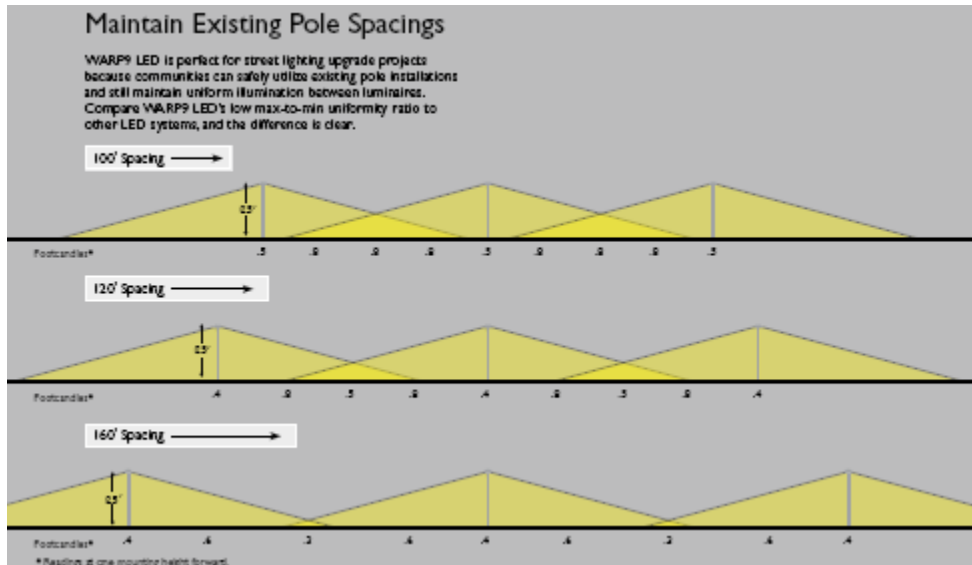

1) Glare, no. Brilliant, yes. Dozens of properly shielded Micro Emitters are canted at a 70 degree angle. Emitters are deeply recessed rather than placed at the lens for optical precision and unrivaled glare control.

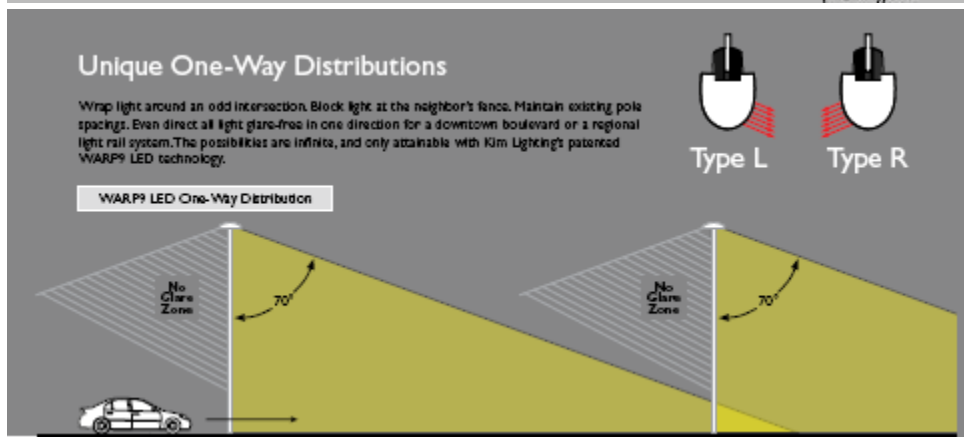

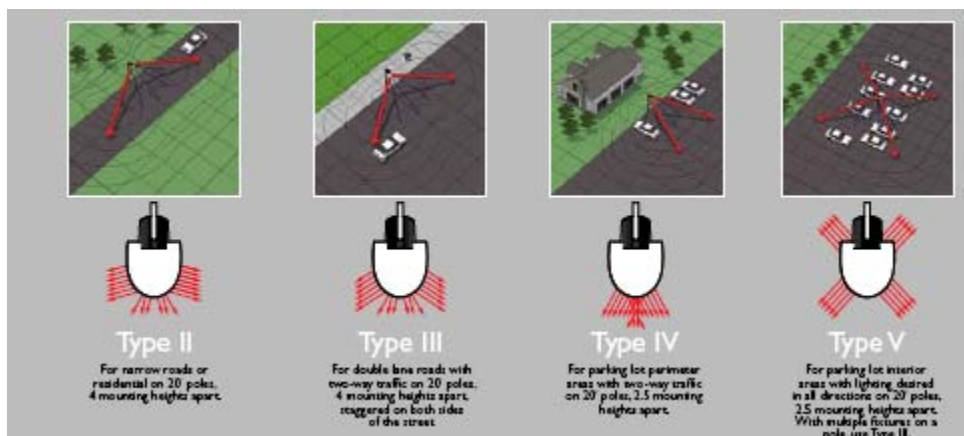

2) Premium safety and comfort. Half of the reflector controlled LED's are directed away from the viewer, reducing glare by nearly 50% compared to competitors.

3) WARP9 LED's unique point and shoot approach provides wide, uniform illumination without hot spots of typical inverted LED bar fixtures.

4) Warp9's removable Emitter Deck offers the ultimate in lighting control, providing true IES distribution patterns, as well as unique new custom distribution patterns. (backlight and uplight are virtually eliminated).

Upgradeable optics, advanced thermal junction monitors, and an enhanced green footprint are just some of the unique features of the Warp9 LED.
