ZUMTOBEL

Zumtobel "Tempura" LED track lighting allows users to change brightness and color temperature at the touch of a button.

1) Tempura's on-board controls allow users to field select between 2700K, 3000K, 3400K, 4000K, 4900K, & 6500K (Tempura uses 6 modules, each with RGB LEDs to create the selected color temperature).

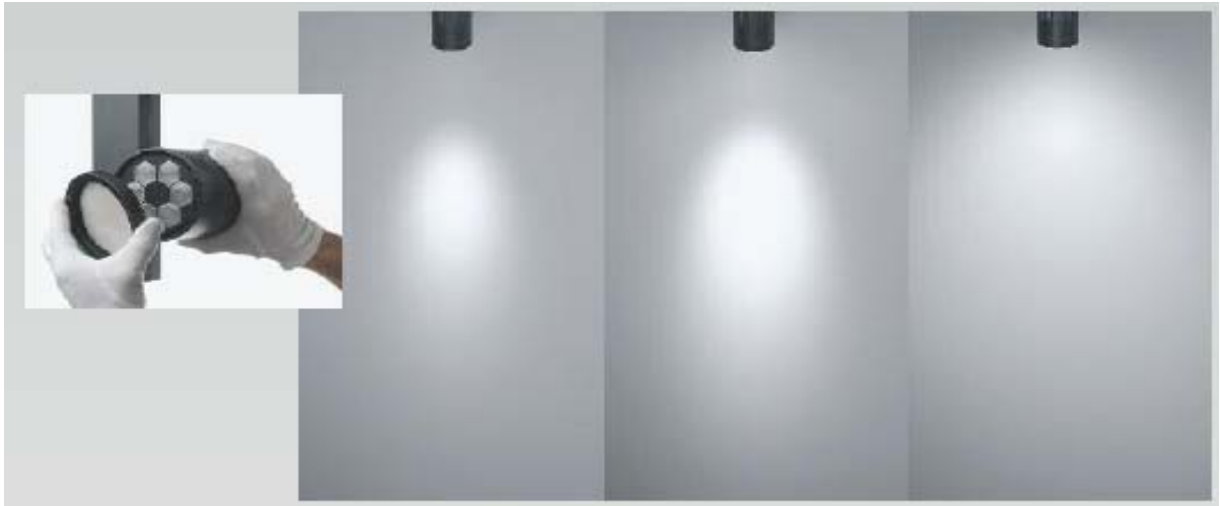

2) Microprocessor adjusts power to the board so that output never varies over the life of the fixture (provides 50,000 hours of consistent, maintenance free light).

3) Each fixture can be individually dimmed from 100 - 10% with no effect on color temperature (Tempura produces no heat or UV to degrade highlighted materials).

4) Beam angle can be field selected at 16 degree, 25 degree or 40 degree with available diffusion lenses.
